

CLAIM AMENDMENTS

1           1. (previously presented) A lamp crystal comprising:  
2           a transparent body formed with an outwardly open bore and  
3           having an outer surface that has a region with a semitransparent  
4           matte finish and that is substantially smooth, transparent, and  
5           polished except at the matte-finish region; and  
6           ~~means for suspending the body from above; and~~  
7           a light-emitting diode fixed in the bore and having  
8           electrical supply wires sufficiently strong to hang the crystal by  
9           and constituting means for suspending the body from above.

2. (canceled)

1           3. (previously presented) The lamp crystal defined in  
2           claim 1 wherein the matte-finish region extends peripherally around  
3           the body.

1           4. (original) The lamp crystal defined in claim 3  
2           wherein the body is formed with a pair of edge bevels that  
3           constitute the matte-finish region.

1           5. (original) The lamp crystal defined in claim 1  
2           wherein the bore has a matte-finish internal surface.

1           6. (original) The lamp crystal defined in claim 5  
2 wherein the diode is a snug fit in the bore.

1           7. (original) The lamp crystal defined in claim 5,  
2 further comprising  
3 a mass of transparent potting between the diode and the  
4 internal surface of the bore.

1           8. (original) The lamp crystal defined in claim 1  
2 wherein the diode carries a lens.

9. (canceled)
